

GOOD FATS

Fats are an essential part of a healthy diet. Fats help absorb vitamins, protect our organs, improve our joint mobility, and much more.

Including fats while also reducing carbohydrates is a great way to control hunger and cravings. While carbs provide quick energy, fats provide more sustained energy and fullness. Don't worry too much about over-eating fat; your body is very good at regulating intake. Consider a salad that is over-dressed. Would you enjoy it? NO! It would be soggy and feel too heavy to happily finish.

But weight loss is not the only goal. Improving your health is important too! For decades, mainstream medical advice was to avoid fat to reduce risk of high cholesterol, heart attacks, and strokes. This advice, however, is not backed by sound science. Instead, we know now that total fat consumption, including cholesterol-containing foods, does not affect rates of cardiovascular events. First we start eating fats, then we begin to focus on eating more good fats.

GOOD FATS

Avocado
Avocado oil
Butter/ghee
Coconut oil
Nut oils
Olives
Olive oil

Canola oil
Corn oil
Crisco
Margarine
Partially hydrogenated oils
Soybean oil
Sunflower oil
Trans fats
Vegetable oil

The type of fat we eat can affect our health by increasing or decreasing inflammation. By lessening inflammation, you may experience health improvements such as less intense symptoms of arthritis, IBS, pain, and improved weight loss.

By including healthy fats rich in Omega-3s and decreasing Omega-6s and trans fats, you are decreasing your whole body inflammation.

Please see your book for a complete list of fats to enjoy.

To find a complete list of fats to enjoy, please see your book.

Here is a list of fats to AVOID due to their inflammatory properties:

MARGARINE

SOYBEAN OIL

REFINED PEANUT OIL

CRISCO

SOYBEAN OIL

CANOLA OIL

VEGETABLE OIL

SUNFLOWER OIL

You can often find these oils and fats in:

SALAD DRESSINGS

STORE-BOUGHT MARINADES

JARRED SAUCES

MAYONNAISE

These fats are very common in the Typical American Diet. Pounds understands that eliminating them entirely would be very difficult. We simply encourage you to reduce them where you can!
