

 POUNDS TRANSFORMATION

GLP MIMICKING DIET FOR

 **INSULIN SENSITIVE** 

OVERVIEW

The next four weeks are going to focus on foods and supplements that increase the production of GLP-1 from your gut cells. The foods recommended are high in polyphenols, slowly digested peptides, long chain fatty acids, and prebiotics that are meant to naturally increase GLP-1 production.

The addition of allulose in the form of RX sugar products, Akkermansia, and exogenous ketones will all enhance GLP-1 production further. Week 1 will introduce these foods/supplements to your body and the subsequent weeks will increase the servings to maximize benefit.
